

## **Impact-O-Graph Announces Tamper resistant version of Its Best-Selling Shock Indicator.**

IOG Products, Inc. under the brand of Impact-O-Graph announces the release of their new tamper-resistant Omni-directional shock indicator, Omni-GWS. Impact-O-Graph's best-selling shock indicator, not only provides indisputable evidence of how the shipment was handled, but also creates accountability through-out the entirety of the supply chain. The Omni- GWS is a resettable impact indicator that can be reused hundreds of times using the resetting tweezers.

Unlike some competitive products with single axis detection requiring two or more devices, the new Omni-GWS is dual axis and can register excessive impacts from all direction. This provides a visual indication that hidden damage may have occurred. Using a single device with multi-axis shock detection will save both time setting up and save money.

The Omni-G and Omni-GWS impact indicators are widely used in industries where shipments of fragile goods, sophisticated equipment and heavy mass products need to be monitored for impacts. Impact-o-graph's latest innovation, designated as the Omni-GWS, is an enhanced version of the Omni G shock indicator. The fully reusable and resettable device now has a unique locking mechanism and key to prevent unauthorized resetting or tampering.

The Omni-GWS has additional weatherproofing and stainless steel components to protect against salt spray and fogging on ocean and longer shipments, extended storage or harsh environments. The Omni-GWS is available in a preset and calibrated range of G forces, to suit a range of sensitivity needs.

"I am pretty excited at what we have done with the Omni G device to enhance it with security, and environmental protection" said Darryl Termine, VP Sales and International Sales Development of Impact-O-Graph.

Many shipping managers are not aware of the options available to them. When a shipment arrives damaged or broken, the customer does not know whether to blame the shipping company or the company they bought the item from. Impact-O-Graph addresses this problem with a range of devices that can monitor small parcels to delicate yet enormous transformers and MRI machines.

Impact-O-Graph products promote accountability amongst handlers throughout the transportation chain which will streamline the shipment process saving you both time and money.
